JORDAN WOOD

PUYALLUP, WA | (360) 506-4598 | jordanwood159@gmail.com | LinkedIn | GitHub | Portfolio Website

PROFESSIONAL SUMMARY

Software developer with a B.S. in Software Development and production experience modernizing a government justice platform. Migrated 3 production pages from AngularJS to Angular 13 on a system used by county officials, law enforcement, and the courts. Builds full-stack web apps with React, TypeScript, and Node.js, and has trained a transformer language model from scratch in PyTorch. Brings 2+ years of management experience, including automation that saved about 40 hours of manual work per week.

EDUCATION

BACHELOR OF SCIENCE (B.S.), SOFTWARE DEVELOPMENT **September 2021 - March 2025**
Grand Canyon University *Phoenix, AZ*

ASSOCIATE OF ARTS (A.A.), COMPUTER SCIENCE **September 2019 - June 2021**
Pierce College *Puyallup, WA*

TECHNICAL SKILLS

- **Languages**: Java, Python, JavaScript, TypeScript, HTML5, CSS3, SQL
- **Frameworks/Tools**: Spring Boot, React.js, Angular 13, AngularJS, Node.js, RxJS, MySQL, PyTorch, Ollama, REST APIs, Git/GitHub, Bitbucket, Vite, Jira, Confluence
- **Concepts**: OOP, SDLC, Agile/Scrum, API Integration, Unit Testing, Data Structures & Algorithms, System Integration, Generative AI, Machine Learning
- **CI/CD & DevOps**: Jenkins, CI/CD Pipelines, GitHub Actions, Linux, Bash/PowerShell

EMPLOYMENT HISTORY

Handshake AI | *AI Trainer - Software Development* **July 2026 - Present**
- Evaluate large language model responses for factual accuracy, reasoning, and instruction-following against detailed project guidelines, flagging failures that feed back into model training.
- Produce original video recordings and prompts as multimodal training data for AI models, meeting strict quality and formatting specifications on independent deadlines.
- Independently manage deadline-driven tasks across multiple AI training projects, consistently delivering accurate, high-quality work on schedule.

Pierce County | *Software Engineer Intern* **February 2026 - July 2026**
- Migrated 3 production pages from end-of-life AngularJS to Angular 13 and TypeScript on LINX, the county's internal justice platform that tracks individuals from arrest through booking for law enforcement and court users.
- Rebuilt the inmate Release workflow, a multi-tab screen opened from an inmate's record, as Angular components with RxJS data services integrated with backend REST APIs.
- Converted the Journal Entry Checkout page, which tracks logged-in sessions across admin, supervisor, and judicial roles; converted a Word document-merge feature used to generate case documents.
- Debugged UI and service-layer issues with Chrome DevTools and unit tests, and shipped all changes through Bitbucket code reviews with senior engineers.

Timberline Development, LLC | *Store Manager* **April 2021 - December 2023**
- Built a JavaScript tool that processed hourly JSON sales reports and automatically deducted sold quantities from the store's Excel inventory manifest, covering 100+ products tracked by multiple Washington State compliance barcodes.
- Replaced manual hourly inventory reconciliation with an automated process, reducing discrepancies by more than 75% and saving approximately 40 staff hours per week.
- Supervised a team of up to 10 and led financial reconciliations, ensuring accurate, compliant reporting in a state-regulated industry.
- Diagnosed and resolved POS, network, printer, and hardware issues, restoring operations quickly and preventing prolonged business disruptions.

PROJECTS

TinyGPT: Transformer Language Model | Python, PyTorch, CUDA | https://github.com/Jordan-360/tinygpt.git
- Built a 10.8M-parameter GPT-style transformer from scratch in PyTorch, implementing tokenization, multi-head self-attention, and the full training loop following a nanoGPT approach.
- Trained it on a 1.1M-character Shakespeare dataset with CUDA GPU acceleration in under 6 minutes, taking output from random characters to original Shakespeare-style dialogue.

RAG-Powered Patch Notes Assistant | TypeScript, React, Node.js, Ollama | https://github.com/Jordan-360/patch-notes-assistant.git
- Built a full-stack retrieval-augmented generation app that answers natural-language questions about Overwatch patch notes with cited sources, running local LLMs and embedding models on a consumer GPU.
- Raised answer accuracy to 90% by engineering structure-aware chunking, metadata filtering, and semantic vector search, plus prompt engineering, a unit-tested buff/nerf rules engine, and LLM failure fallbacks.

Fantasy Pokémon | React, JavaScript, Node.js, Vercel | fantasy-pokemon-v2.vercel.app
- Built and deployed a mobile-first fantasy football web app in React that pairs all 704 NFL starters with Pokémon, featuring a 15-round snake draft, 14-week season with playoffs, waiver wire and browser-saved leagues with no backend.
- Engineered the game engine as UI-free JavaScript modules: CPU drafting by value over replacement for 9 opponents, a Node.js pipeline that scores weeks from real NFL stats (nflverse), and a headless simulator that plays full seasons to verify every game rule.

CERTIFICATIONS

- Google IT Support Professional Certificate: Issued Mar 2024 Credential ID: F3Z85YKMU3NV
- Google Cybersecurity Professional Certificate: Issued Jan 2024 Credential ID: VL2FY8P5W835
