JORDAN WOOD

PUYALLUP, WA | (360) 506-4598 | jordanwood159@gmail.com | LinkedIn | GitHub | Portfolio Website

PROFESSIONAL SUMMARY

Software developer with a B.S. in Software Development and production experience modernizing a government justice platform. Migrated 3 production pages from AngularJS to Angular 13 on a system used by county officials, law enforcement, and the courts. Builds full-stack web apps with React, TypeScript, and Node.js, and has trained a transformer language model from scratch in PyTorch. Brings 2+ years of management experience, including automation that saved about 40 hours of manual work per week.

EDUCATION

BACHELOR OF SCIENCE (B.S.), SOFTWARE DEVELOPMENT — **September 2021 - March 2025**
Grand Canyon University — *Phoenix, AZ*

ASSOCIATE OF ARTS (A.A.), COMPUTER SCIENCE — **September 2019 - June 2021**
Pierce College — *Puyallup, WA*

TECHNICAL SKILLS

- **Languages**: Java, Python, JavaScript, TypeScript, SQL, HTML5, CSS3
- **Frameworks & Libraries**: React, Angular, AngularJS, Node.js, Spring Boot, RxJS, PyTorch
- **Tools & Platforms**: Git/GitHub, Bitbucket, Jenkins, REST APIs, MySQL, Jira, Confluence, Vite, Vercel, Chrome DevTools, Linux
- **Concepts**: OOP, Agile/Scrum, SDLC, CI/CD, Unit Testing, Data Structures & Algorithms, Machine Learning, Generative AI (RAG)

EMPLOYMENT HISTORY

Handshake AI | *AI Trainer - Software Development* — **July 2026 - Present**
- Evaluate and correct large language model outputs for accuracy, reasoning, and instruction-following, identifying failure cases that are used to retrain and improve the models.
- Create original video and prompt data for multimodal AI training, producing submissions that meet strict quality and formatting standards for acceptance.
- Selected for multiple AI training projects through competitive screening, applying a software development background to catch technical and logic errors in AI responses.

Pierce County | *Software Engineer Intern* — **February 2026 - July 2026**
- Migrated 3 production pages from end-of-life AngularJS to Angular 13 and TypeScript on LINX, the county's internal justice platform used by Pierce County Superior Court and law enforcement to manage records from arrest through booking and beyond.
- Rebuilt the inmate Release workflow, a multi-tab screen opened from an inmate's record, as Angular components with RxJS data services connected to backend REST APIs.
- Converted the Journal Entry Checkout page, which tracks logged-in sessions across admin, supervisor, and judicial roles, and a Word document-merge feature used to generate case documents.
- Debugged UI and service-layer issues with Chrome DevTools and unit tests, shipping all changes through Bitbucket code reviews with senior engineers.

Timberline Development, INC | *Store Manager* — **April 2021 - December 2023**
- Built a JavaScript tool that processed hourly JSON sales reports and automatically deducted sold quantities from the store's Excel inventory manifest, covering 100+ products tracked by multiple Washington State compliance barcodes.
- Replaced manual hourly inventory reconciliation with an automated process, reducing discrepancies by more than 75% and saving approximately 40 staff hours per week.
- Supervised a team of up to 10 and led financial reconciliations, ensuring accurate, compliant reporting in a state-regulated industry.
- Diagnosed and resolved POS, network, printer, and hardware issues, restoring operations quickly and preventing prolonged business disruptions.

PROJECTS

TinyGPT: Transformer Language Model | Python, PyTorch, CUDA | https://github.com/Jordan-360/tinygpt.git
- Built a 10.8M-parameter GPT-style transformer from scratch in PyTorch, implementing tokenization, multi-head self-attention, and the full training loop following a nanoGPT approach.
- Trained it on a 1.1M-character Shakespeare dataset with CUDA GPU acceleration in under 6 minutes, taking output from random characters to original Shakespeare-style dialogue.

RAG-Powered Patch Notes Assistant | TypeScript, React, Node.js, Ollama | https://github.com/Jordan-360/patch-notes-assistant.git
- Built a full-stack retrieval-augmented generation app that answers natural-language questions about Overwatch patch notes with cited sources, running local LLMs and embedding models on a consumer GPU.
- Raised answer accuracy to 90% by engineering structure-aware chunking, metadata filtering, and semantic vector search, plus prompt engineering, a unit-tested buff/nerf rules engine, and LLM failure fallbacks.

Fantasy Pokémon | React, JavaScript, Node.js, Vercel | fantasy-pokemon-v2.vercel.app
- Built and deployed a mobile-first fantasy football web app in React that pairs all 704 NFL starters with Pokémon, featuring a 15-round snake draft, 14-week season with playoffs, waiver wire and browser-saved leagues with no backend.
- Engineered the game engine as UI-free JavaScript modules: CPU drafting by value over replacement for 9 opponents, a Node.js pipeline that scores weeks from real NFL stats (nflverse), and a headless simulator that plays full seasons to verify every game rule.

CERTIFICATIONS

- Google IT Support Professional Certificate: Issued Mar 2024 Credential ID: F3Z85YKMU3NV
- Google Cybersecurity Professional Certificate: Issued Jan 2024 Credential ID: VL2FY8P5W835
